The Sobel operator, sometimes called the Sobel–Feldman operator or Sobel filter, is used in image processing and computer vision, particularly within edge detection algorithms where it creates an image emphasising edges. It is named after Irwin Sobel and Gary Feldman, colleagues at the Stanford Artificial Intelligence Laboratory (SAIL). Sobel and Feldman presented the idea of an "Isotropic ...

The syntax of the Python programming language is the set of rules that defines how a Python program will be written and interpreted (by both the runtime system and by human readers).The Python language has many similarities to Perl, C, and Java. However, there are some definite differences between the languages.

Using Ghostscript with overprinting and spot colors. In general with PostScript and PDF interpreters, the handling of overprinting and spot colors depends upon the process color model of the output device.Devices that produce gray or RGB output have an additive process color model. Devices which produce CMYK output have a subtractive process color model. . Devices may, or may not, have support ...

Resizing Images The most obvious and common way to change the size of an image is to resize or scale an image. The content of the image is then enlarged or more commonly shrunk to fit the desired size.

1.. Introduction In this paper we introduce a new method for the analysis of problems governed by partial differential equations such as, for example, solids, structures and fluids.

Linear Algebra and Linear Systems. A lot of problems in statistical computing can be described mathematically using linear algebra. This lecture is meant to serve as a review of concepts you have covered in linear algebra courses.

General Distortion Techniques Now that we have been introduced to the simple distortion operators that IM provides, let's take a step back and look at the nitty-gritty, and see how image distortions actually work, and how you can improve the way you use them.
