Welcome. Welcome to the web site for Agent-based and Individual-based Modeling: A Practical Introduction. This is a textbook on scientific applications of agent-based (or "individual-based"; we use the terms synonymously) modeling to study complex systems.

Agent-based and Individual-based Modeling: A Practical

Introduction & Summary Computer system users, administrators, and designers usually have a goal of highest performance at lowest cost. Modeling and simulation of system design trade off is good preparation for design and engineering decisions in real world jobs.

Turn theory into practice by entering COMAP's Mathematical Contest in Modeling (MCM). The study of mathematics as a subject in its own right may have started with Pythagoras, but people have been counting as a basic necessity of everyday life for thousands of years.

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.

Compartmental models are a technique used to simplify the mathematical modelling of infectious disease. The population is divided into compartments, with the assumption that every individual in the same compartment has the same characteristics.

The General Algebraic Modeling System (GAMS) is a high-level modeling system for mathematical optimization. GAMS is designed for modeling and solving linear, nonlinear, and mixed-integer optimization problems. The system is tailored for complex, large-scale modeling applications and allows the user to build large maintainable models that can be adapted to new situations.
