

the use of coal pdf

Non-fuel uses of coal include chemical products such as refined coal tar which is used in the manufacture of chemicals, for example creosote oil, naphthalene, phenol and benzene. Ammonia gas recovered from coke ovens is used to manufacture ammonia salts, nitric acid and

Non-fuel uses of coal - United States Energy Association

Coal Use in Steel Production. The Coal Resource: A Comprehensive Overview of Coal 23 The coking coal is crushed and washed. It is then "purified" or "carbonised" in a series of coke ovens, known as batteries. During this process, by-products are removed and coke is produced.

SECTION FOUR HOW IS COAL USED? - Home of World Coal

coal in the United States is between 100 to 300 million years old. It is the most abundant rank of coal found in the United States, accounting for about half of U.S. coal production. Bituminous coal is used to generate electricity and is an important fuel and raw material for the steel and iron industries.

COAL -- A Fossil Fuel - Lehigh University

Of the three fossil fuels in common use " natural gas, petroleum, and coal " the United States has far more coal than gas and petroleum (compare Figures 7-1, 8-1 and 9-1). This suggests that, when supplies of gas and petroleum become scarce, it would be possible to turn to coal as our major fossil fuel energy resource.

Chapter 7 COAL - Penn State College of Earth and Mineral

Today, coal provides 16.0 percent of America's energy needs. Around 33 percent of our electricity comes from coal-fired power plants. Coal Mining Coal companies use two methods to mine coal: surface mining and underground mining. Surface mining is used to extract about one-third of the coal in the United States.

to 46%. As a result of the slower growth and decline in China's coal use, the world coal share of total primary energy consumption declines steadily, from 28% in 2012 to 22% in 2040 "in contrast to its sustained growth from 24% in 2001 to 29% in 2009, primarily as a result of increasing coal use in China.

Chapter 4 - Coal

The recycling of coal combustion by-products , or coal utilization by products (CUB) which includes the solid residue from coal and gasification, is a practice that can play a significant role in maintaining both the cost advantage and environmental acceptability of coal-fired power plants.

Commercial Use of Coal Utilization By-products and

The most significant uses of coal are in electricity generation, steel production, cement manufacturing and as a liquid fuel. Different types of coal have different uses. Steam coal - also known as thermal coal - is mainly used in power generation.

CLHDPZZ = coal distributed to the residential and commercial sectors (commercial sector from 2008 forward) in each state; CLKDPZZ = coal distributed to coke plants in each state; and CLODPZZ = coal distributed to other industrial users in each state. The U.S. totals for the three state-level series are calculated by summing the state data.

Section 2. Coal - Energy Information Administration

coal comes from plants, and plants get their energy from the sun, the energy in coal also came from the sun. The coal we use today took millions of years to form.
